The Inter-American Dialogue's Global Trends program aims to increase Latin America's exposure to long term international scenarios and the growing global trends network. In cooperation with the Inter-American Development Bank, we have created an online database, the *Global Trends and Future Scenarios Database of Reports*, found at <http://globaltrends.thedialogue.org/>. This important resource includes nearly 800 foresight publications and reports from around the world. These documents present and analyze long-term global and regional trends and future scenarios.

The *Global Trends and Future Scenarios Database of Reports* seeks to provide governments, banks and corporations, universities and think tanks, and other institutions around the world, especially those in Latin America, fresh, continuing access to vital information and analyses on relevant trends and future scenarios, as well as strengthen capacities to conduct and disseminate similar studies and design and implement better public policies. Users can filter and search for reports via keyword, issue area, author, region, country, publishing institution, and year published.

The database was developed to be a public good, and we therefore welcome efforts to share the resource with interested individuals and institutions around the world.

To be included in our Global Trends listserv, or to submit a report for inclusion in the database, please contact Caitlin Reilly at creilly@thedialogue.org.
